

experience

RyderShip

2022- 2026

Software Engineer | Remote

- Contributed to a fulfillment system processing tens of thousands of orders daily with major peak-season traffic
- Built full-stack features using Ruby on Rails APIs and Vue 3 for a large-scale third-party logistics platform
- Implemented infrastructure changes and deployments with Terraform and AWS, including ephemeral QA environments for testing and review.
- Developed release automation workflows with GitHub Actions to coordinate releases across teams
- Implemented integrations with Shopify, carrier APIs, and other external commerce systems
- Investigated and resolved production issues reported by warehouse operations, support teams, and API partners
- Investigated operational issues in warehouse workflows and documented findings for engineering teams

nooklyn.com
